

# CORONAVIRUS SCHOOL CLOSURE

## PROBLEM OF THE DAY

March 13th, 2020

**How much toilet paper does a family of 4 need during the 2-week school closure?**

**HINTS:**

- *Estimate how many squares of T.P. are needed for each time a person pees, and each time a person poops*
- *Estimate how many times a day each person will pee and poop*
- *Use those estimations to calculate how many squares of T.P. are needed for the whole family for the whole 2-week closure.*
- *Find out how many squares of toilet paper are on a roll.*
- *Determine how many rolls the family of 4 will need. You might need to round up!*

**Check my instagram highlights to see my work and my answer - your answer might be slightly different than mine, but if it is between 6 and 10 T.P. rolls I would count it as correct!**
